

## Why do I have to know this stuff?

Imagine humans when they first had fire, when they first made wheels, when they first established where they were going by looking at the stars. How did the things we consider basic - heat, light, navigation, transportation, entertainment - ever come to be? The answers all touch on physics and chemistry. $\qquad$ tells us how to make things and what things are made of. $\qquad$ tells us how and why things move.
What are the ABC's Of Science? a. the metric system b. safety c. the scientific method Let's Talk Metric: Here in America we use an English system: foot, yard, and mile. However, MOST people use another system called the International System of Units or the ___ (which stands for Système Internationale d'Unités). This is the modern form of the

It all depends on the foot! Numbers and units are used to make measurements. The distance from your desk to my desk could be 25 shoe lengths or 30 shoe lengths. It depends on how big the shoe is. Think of Shaq's foot versus Mini-Me. You can see that to use practical measurements, a measurement standard HAS to be used. In other words, everyone has to use the SAME system or units. Otherwise, it just gets confusing. A is a fixed quantity used by everyone when measuring.

## Advantages to using the metric system.

1: It helps scientists share \& $\qquad$ their results \& observations. If I conducted

Physical science is the study of $\qquad$
$\qquad$
$\qquad$
$\qquad$ and $\qquad$ .
The universe is composed of matter. Your body, this paper, and your desk are matter. In physical science, you will learn the properties of metals, water, air, and many other kinds of matter. This year we'll study chemistry, physics and space science.
 an experiment here in America, even a scientist in Zimbabwe would be able to understand my measurements. 1: All units are based on the number ___. Changing from one unit to another is easy!

The second part is the type of $\qquad$ .
Part 1: the PREFIX

| Prefix | Symbol | Meaning |
| :---: | :---: | :--- |
|  | $\mathbf{k}$ | 1000 (1 thousand) |
| centi | $\mathbf{c}$ | 0.01 (1 one-hundredth) |
|  | $\mathbf{m}$ | 0.001 (1 one-thousandth) |
| micro | $\boldsymbol{\mu}$ | 0.000001 (1 one-millionth) |

Try this: $\mathbf{1}$ kilometer is equal to $\qquad$ meters.
kilo-meter: prefix=kilo or 1000 unit $=$ meter, measuring distance
meters
$5 \times 1000$ meters $=$
$\qquad$
10 kilometers is equal to $\qquad$ m $10 \times 1000 \mathrm{~m}=$ $\qquad$

Still Confused?
OK, let's get this as simple as we can. We are going to look at all of our metric measurement $\qquad$ as two-part words. The first part is the $\qquad$ .
The second part is the type of $\qquad$

## Part 2: the UNIT

| What are we measuring? | Unit | Symbol |
| :---: | :---: | :---: |
| Length |  |  |
| Volume | liter |  |
| Mass |  |  |
| Temperature | Kelvin |  |

What unit would you use to measure each of the following? Water in a bottle
The distance from my classroom to the bathroom The amount of heat in the classroom? Kelvin or Celsius How much matter is in a paperclip

## Smile Metric Lab

## Objectives:

* to learn how to use a metric ruler to measure length
* to accurately read and record measurements taken in centimeters (cm) and millimeters (mm)

Lab Score:

## Materials:

rulers
yarn
smiles

## Procedures:

1. Take a piece of yarn and measure your partner's smile straight across from corner to corner
2. Keep your fingers on the yarn as you transfer the yarn to the ruler
3. Write the student name, and record measurements, cm and mm , in Data Table for your classroom table
4. Pick a table representative to complete the classroom data table on the projector
5. Complete your own data chart from the projector data
6. Throw yarn away
7. Complete the questions, graph and conclusion

Data Table: (10 pts)

## Analysis/Results: (5pts)

1. Who had the largest smile? $\qquad$ cm: $\qquad$ mm
2. Smallest $\qquad$ cm ? $\qquad$ mm
3. Whose smile is in the average range? .
4. Including everyone, how big is our smile as a class?!?! $\qquad$ cm $\qquad$ mm
5 . What is the connection between cm and mm ?
6 . How many centimeters are on your ruler? $\qquad$ Millimeters? $\qquad$

Bar graph your results. (15pts)
